Se define la funcion f[x]

$$f[x_] := -x^4 + 6x^2 + 11;$$

Graficamos para observar la raíz

$$y[x_{-}, a_{-}] := d[a] (x - a) + f[a];$$
  
 $Plot[\{f[x], y[x, 2]\}, \{x, -5, 5\}, PlotRange \rightarrow \{-10, 25\}]$ 

Se realiza la derivada de la función, y se define nuestro x[n] para las siguientes iteraciones con el e[n] para medir el error

$$D[f[x], x]$$

$$12 x - 4 x^{3}$$

$$d[x_{-}] := 12 x - 4 x^{3};$$

$$x[0] = 20;$$

$$x[n_{-}] := x[n-1] - \frac{f[x[n-1]]}{d[x[n-1]]};$$

$$e[n_{-}] := Abs[x[n] - x[n-1]];$$

$$m = N[Table[\{n, x[n], e[n], TrueQ[e[n] < 10^{-6}]\}, \{n, 1, 25\}]];$$

Se utiliza la función de Grid para graficar el número de iteraciones necesarias para encontrar el error buscado.
